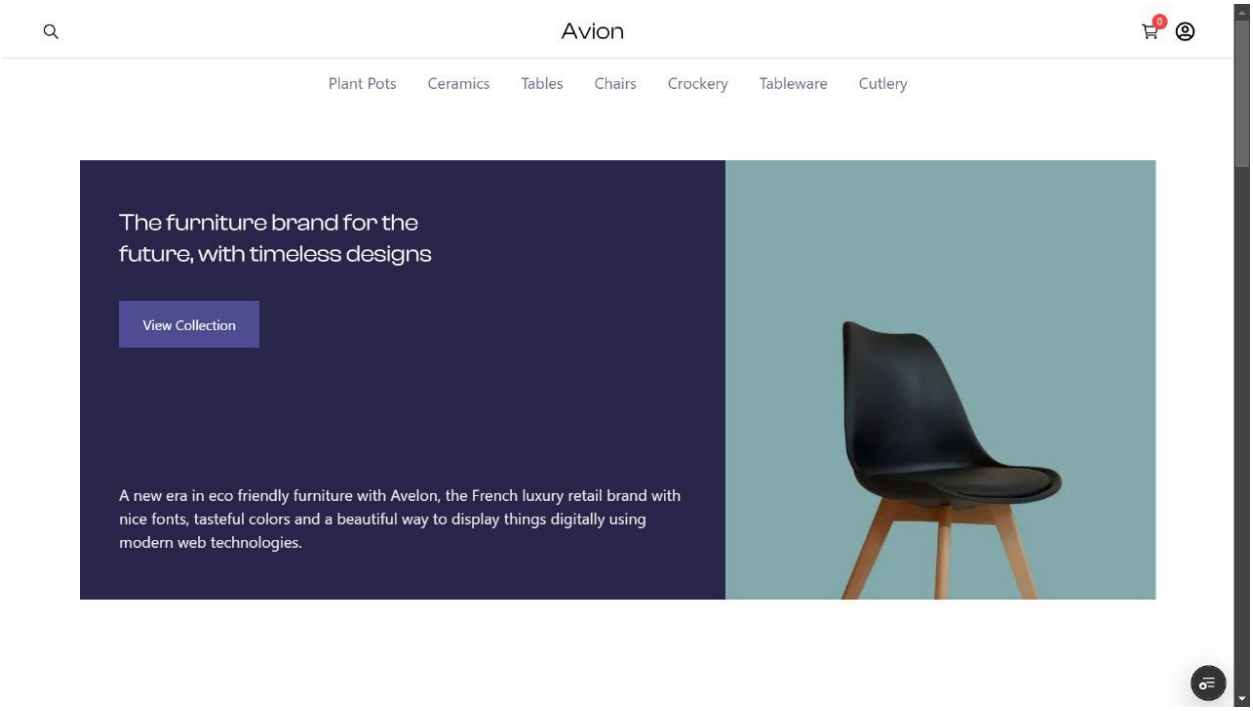
Day 4 Hackathon Update

Today, I created **dynamic components** for the following pages:

- 🔍 View Product Page
- 📂 All Products Page
- 🏠 Home Page
- 🛒 Cart Page
- ⭐ Wishlist Page

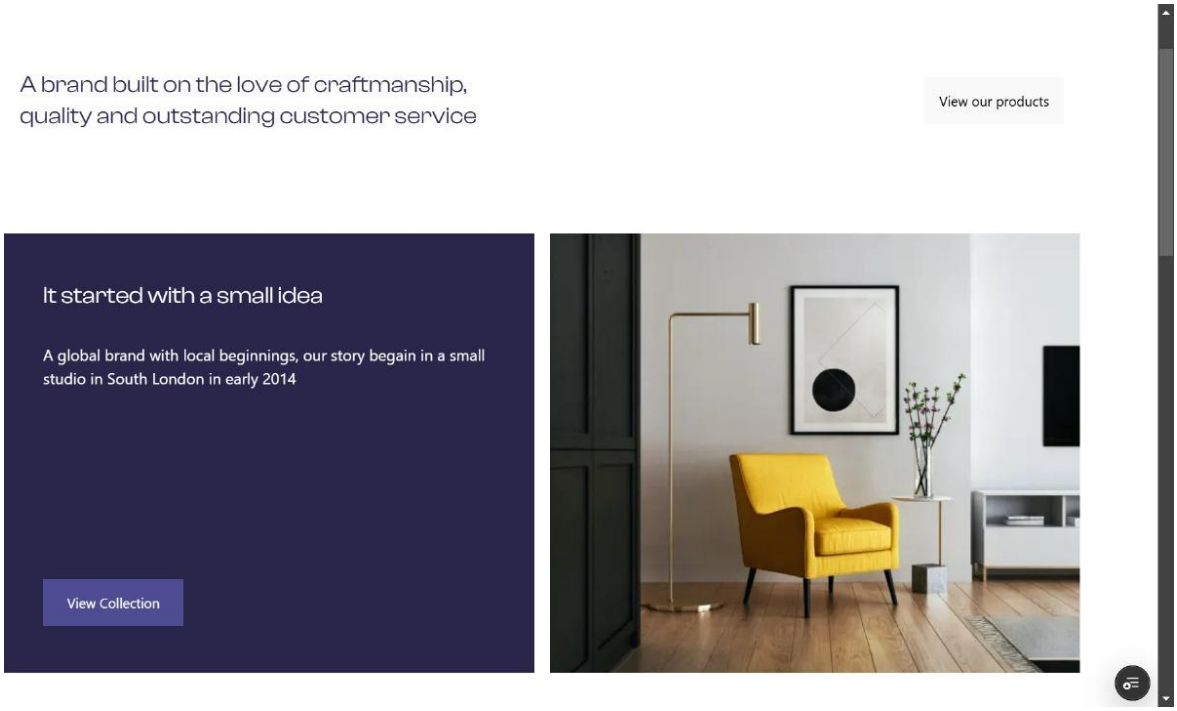
Loving the progress so far!

Home Page:



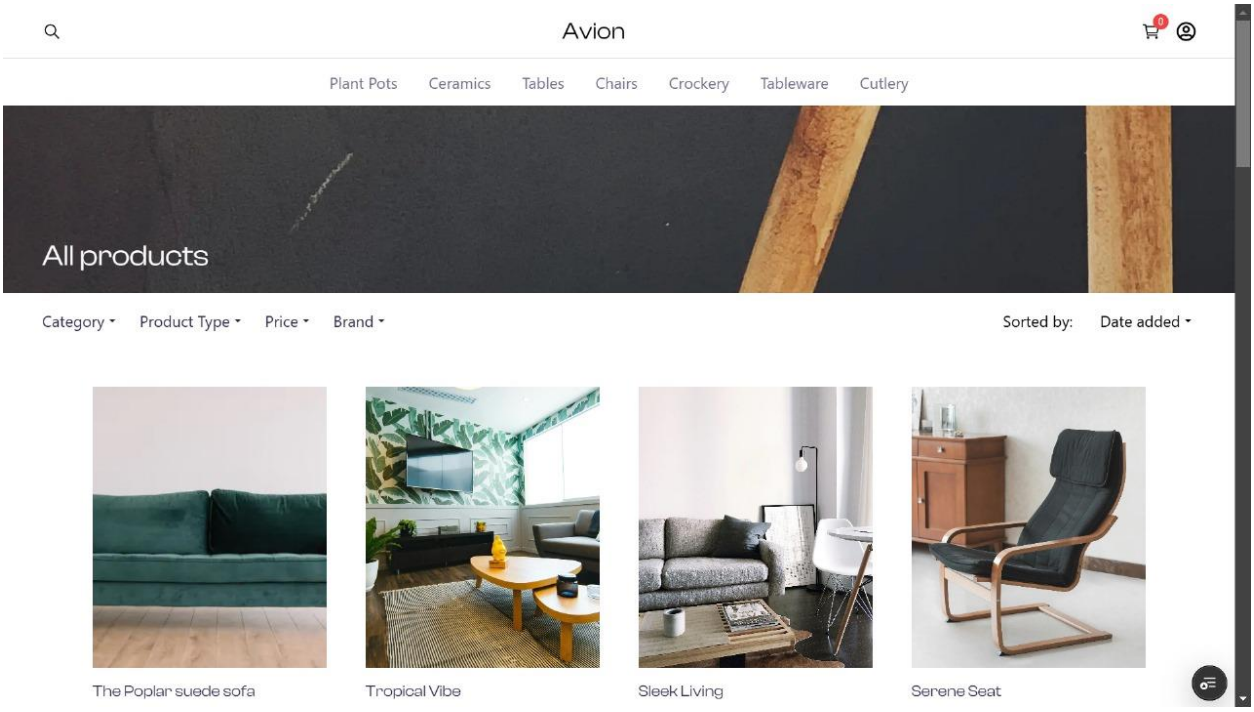
View Product Page:

This page dynamically displays detailed information about a selected product, including its name, description, price, images, and availability. It also includes interactive elements like "Add to Cart" and "Add to Wishlist" buttons, ensuring a seamless user experience for exploring and purchasing products.



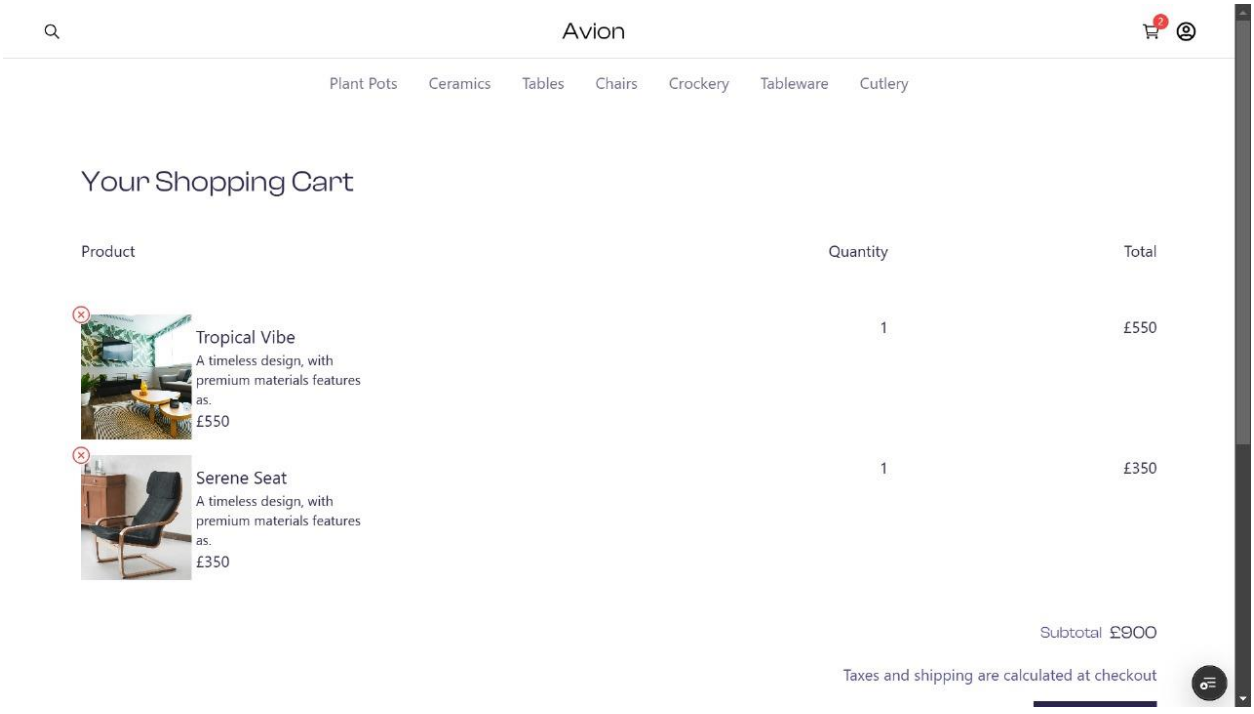
All Products Page:

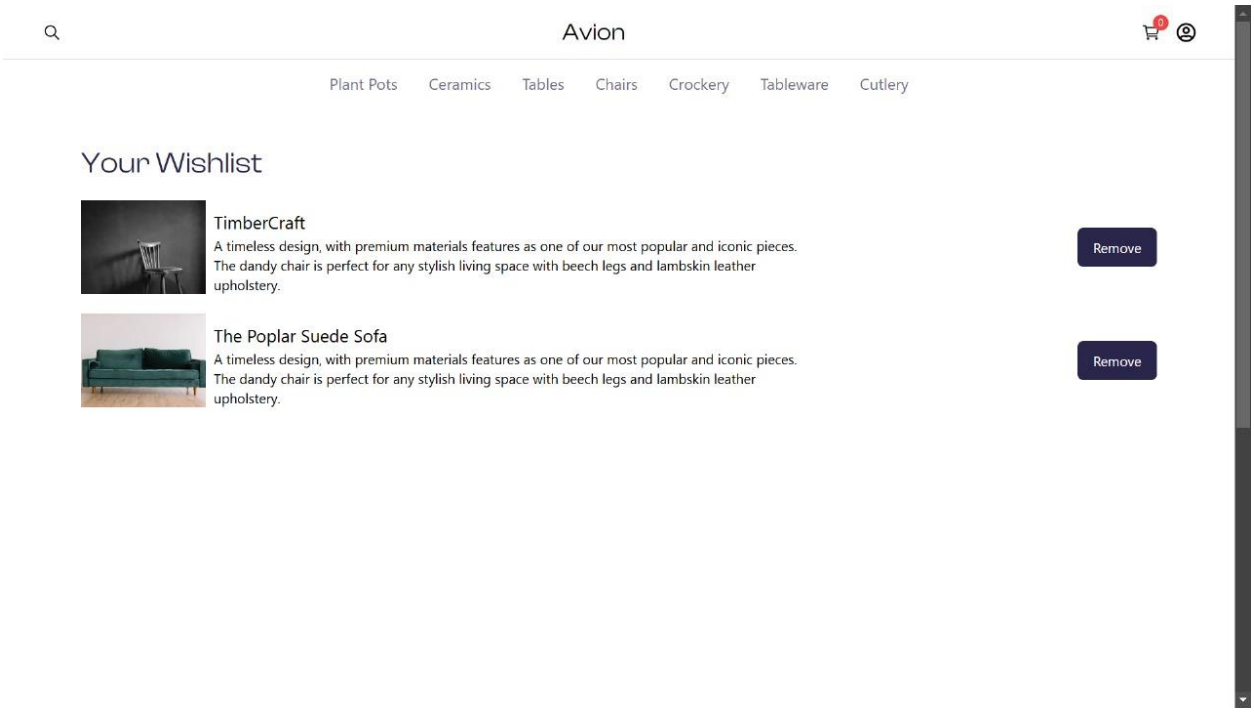
This page showcases a dynamic grid of all available products, complete with their images, names, and prices. Users can browse the entire catalog, apply filters or sorting options, and quickly navigate to individual product details, ensuring a smooth and intuitive shopping experience.



Cart Page:

The Cart Page dynamically displays all the items a user has added to their cart. It includes product details, quantities, individual prices, and a total price summary. Users can update quantities, remove items, or proceed to checkout, making it a crucial step in the purchasing process.



Wishlist Page:


The Wishlist Page allows users to save and organize their favorite products for future consideration. It dynamically displays product details, including images, names, and prices, with options to move items to the cart or remove them. This feature enhances the user experience by making shopping more personalized and convenient.
